Technologies

Languages: Python, SQL, Bash, Ruby, JavaScript

ML/AI: Pandas, NumPy, scikit-learn, matplotlib, seaborn

DevOps/Cloud: Docker, Terraform, Kubernetes, AWS EC2/Lambda/ELB/EKS/SNS/SQS

Databases: PostgreSQL, BigQuery, Snowflake, Redshift

Education

University Of Vermont Aug. 2024 to present

M.S. in Computer Science with a specialization in complex systems

SUNY Plattsburgh Aug. 2013 to May 2017

B.S. in Computer Science

Experience

Software Engineer New York, New York
Singuli, Inc May 2022 to May 2024

- Reduced median client onboarding time by 80% by implementing ETL pipelines to daily ingest sales, inventory and revenue data using Apache Airflow, Python and SQL
- Improved forecast quality by 20% by adding sanity checks to ensure data quality for machine learning algorithms like k-means clustering and time-series regression
- Increased number of prospective clients by 30% by implementing a competitor dashboard by analyzing inventory, revenue and sales data from clients' competitors using Flask, SQL, PostgreSQL and Redshift
- Improved API response time by 50% (10s to 4.8s) through PostgreSQL query optimization that enabled real-time reports on historical sales and inventory data
- Reduced Redis memory footprint by 60% by re-factoring background job module

Integration Engineer Burlington, VT
Faraday, Inc June 2019 to May 2022

- Implemented ETL pipelines on Kubernetes (EKS) to ingest customer data and geospatial data from 50+ data sources using Python, Ruby, SQL and BigQuery
- Implemented micro-services in Python and Ruby to seed Facebook lookalike audiences with AI powered cohorts and increased client ROAS by 50%
- Implemented a micro-service in Python to deploy AI powered bid modifiers to Google Ads at the zip code level and increased clients' ad campaign conversion rates by 38%

Jr Data Scientist Burlington, VT
IXIS Digital Aug. 2017 to Sept. 2019

- Analyzed e-commerce data from Google Analytics and Adobe Analytics and generated ad-hoc reports using R, SQL and Python
- Implemented CI/CD pipelines for bare metal servers using Docker and GitLab CI
- Built a Python tool to concurrently scrape 100+ sites and keep track of changes in critical DOM elements

Projects

My Secret Santa

- Launched a top 20 web app on Product Hunt for highly randomized Secret Santa draws that reached 100+ users from US, Canada, India, Ukraine, France and more
- Implemented features like OAuth login, notifications, anonymous messaging etc using Flask, SQLAlchemy, Celery, Redis and PostgreSQL
